

I'm not robot!

Math worksheets and visual curriculum I regularly upload resources that I have created during 30 years as a teacher. Most of these are maths, but there are some ICT/Computing and Tutor Time activities. All of the resources are my own and are not available from third-parties. The resources have been tweaked over time and I have had many happy lessons and shed-loads of happy and successful students. At the end of 2017 the TES announced that I was the most downloaded new author and in 2018 another 2 million were added to the count.Last updated10 November 2019These worksheets (with solutions) help students take the first steps and then strengthen their skills and knowledge of finding unknown sides or angles using The Tangent Ratio. Questions are carefully planned so that understanding can be developed, misconceptions can be identified and so that there is progression both across and down each sheet. Interactive versions of these sheets are available at The interactive version allows individual questions to be selected for enlarged display onto a screen. The answer can then be worked out 'live' by the teacher (or student) or a single click will reveal my solution. This not only helps in class, but it is also very useful for a student who is revising at home.
